

Greetings!

Industry interest in cybersecurity for Distributed Energy Resources (DER) is growing at a rapid pace. Your SunSpec team is responding to this trend in several ways.

- Featuring experts from SunSpec members Kyrio, Sectigo, Kitu Systems, and QualityLogic, our March 25th California Rule 21 workshop San Francisco focused on Public Key Infrastructure for DER. We had a lively discussion and received affirmation that SunSpec members want more on this topic.
- Our new DER Cybersecurity webinar series kicks off this week, with a high number of registrations to date. You will find the information below to register.
- The cybersecurity data-in-flight workgroup is also experiencing robust participation. Led by experts from Sandia National Labs and GridSME, this group will add to the emerging best practices in cybersecurity for DER and continue to drive the concepts that emerge from these best practices into relevant national and international standards.
- Our UCSD Extension course, Secure Communication Networking for Distributed Energy Resources, continues to gain students. Registration is now open for the Spring online class. Member and volume discounts are available for your team.

We will also cover cybersecurity and many other topics at the SunSpec Annual Member meeting, scheduled for Fall 2019. Please click the survey link below to let us know what else we should be focusing on at that important meeting.

There are many opportunities for you to learn, contribute to and be a part of building strong security for the growing DER ecosystem. Join us.

Happy Earth Month!
